About Me

I am a motivated and professional IT and management graduate with a strong foundation in software development, network administration, and data analysis. I am eager to apply my theoretical knowledge and practical project experience to contribute to a dynamic team and grow within a challenging IT environment. I am looking for an entry level position that leverages my problem-solving skills, technical proficiency, and passion for innovation.

Core Skills

Web Technologies:

HTML, Node.js, REACT

Databases:

MySQL, MongoDB

Networking:

TCP/IP, DNS, DHCP, Routing, Switching

Software/Applications:

Microsoft Office Suite

Soft Skills:

Problem-Solving, Critical Thinking,
Teamwork, Communication, Adaptability,
Time Management, Self-Learning

Technical skills:

Power BI, Linux, Kafka Apache, Git

Education

Northwest University 2022-2025

BSc in Information Technology and Management

Coursework: Data structures & algorithms, object oriented programming, user interface programming, system analysis and design, information security, data analytics, AI, database management systems, computer networks, operating systems, decision support systems.

Achievements

Certification Name:

Computer hardware basics,

Issuing Body: Cisco

Date issued: April 08, 2024

Languages

- English
- Zulu
- Shona
- Ndebele
- Python
- C++
- Java
- SQL
- C#

Projects

Project name: Tawanda Home of Love

Date: Feb - Sept 2024

Description: Tawanda Home of Love is a system for an orphanage. It is an automated system that maintains children, staff, sponsors and volunteers.

Technologies: MySQL database, Visual studio (C#), GitHub.

Outcomes: This project equipped me with the following skills:

- Soft skills: Team collaboration, communication and critical thinking.
- Analytical and problem-solving skills: Requirement analysis, problem identification and process modelling.
- Technical skills: Database design, user interface design, system design and programming basics in C#.

Contribution: I was part of the planning, Requirement analysis documentation, System design and system development.

Project name: Clinic Patient Management System

Date: March - May 2025

Description: This is a clinic management system that automates a clinic paper system. It facilitates the management of patients, medical staff, events, campaigns as well as its appointment s.

Technologies: Oracle database management environment.

Outcomes: This project helped me sharpen various skills further, such as:

Soft skills: Team collaboration, communication and critical thinking.
Analytical and problem-solving skills: Problem identification and process modelling
Technical skills: Database design, SQL

Contribution/role: I got an opportunity to be the group leader of the project. I was also part of planning and creation of the database system.

Project name: FIT@NWU (Gym manager application)

Date: Aug - Oct 2025

Description: FIT@NWU is a gym manager app for a university. This idea came through solving a real-life problem that the university currently experiences. This app has a student side and a manager side, with functionalities like profile management, user authentication and exercise tracking.

Technologies: Visual code with node.js and react, MySQL DB and Mongo DB

Outcomes: In this project I acquired skills in coding in visual code as a full stack developer, developing a decent application, sharpening my skills as a developer, experienced how to work in a team of developers, and using the collaboration tools like git for version control etc.

Contribution/Role: Everyone got a chance to be a full stack developer for chosen pages of the application.
